POWERSCALE · ONEFS WEBUI · LIVE DEMO

Talk to your storage cluster.

An AI assistant built into the OneFS console — it answers your admin questions from the official documentation, with sources.

👋 **Walk up and ask it anything**

THE PROBLEM, IN ONE NUMBER

1 in 5

Every one is a ticket that didn't need a human.

OneFS support cases are questions the documentation already answers —

“how do I do X?” and “what does this cluster event mean?”

WHY IT HAPPENS

The answer exists — just not on the screen the admin is looking at.

In the console

Admin hits a question mid-task

Leaves to search

2,000+ pages of PDFs and KB articles

Opens a ticket

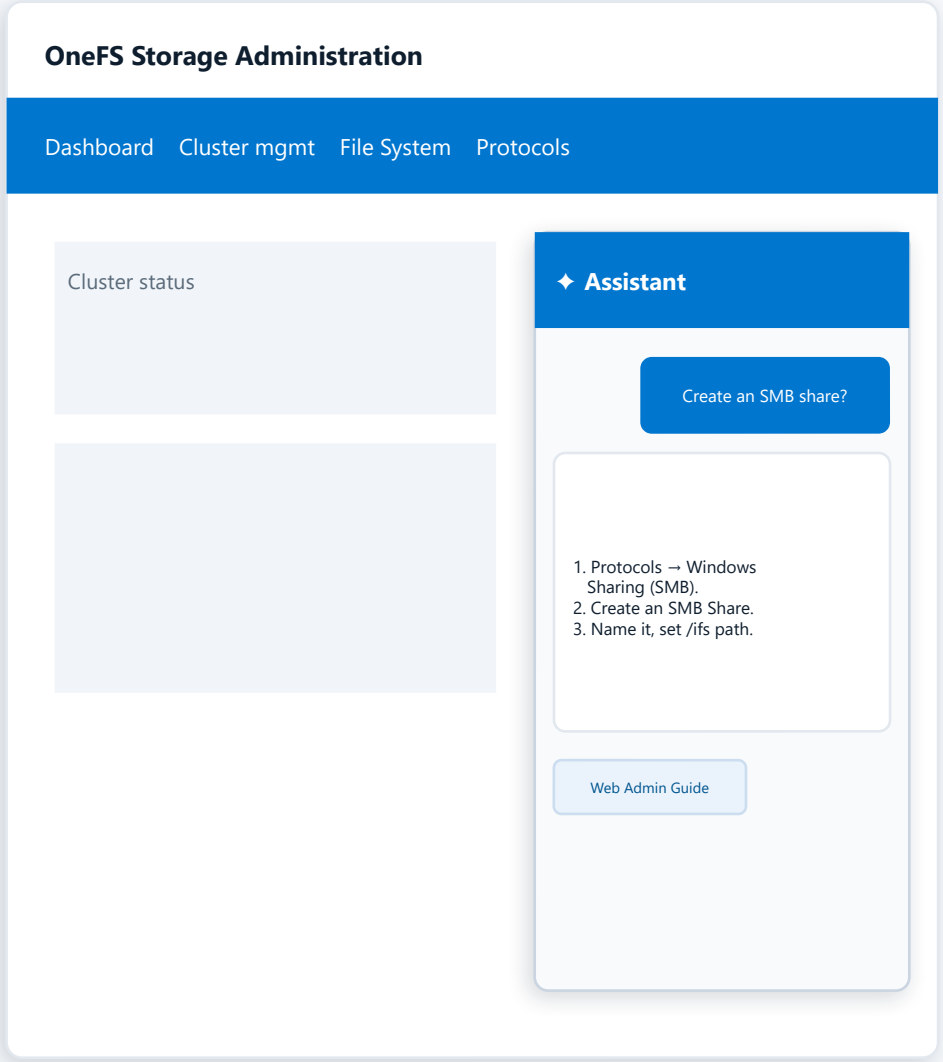

...or just asks Dell support

THE IDEA

So we put an expert inside the WebUI.

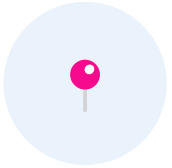

Ask in plain English, right in the console.
Answers come only from the official OneFS 9.12 docs — every one is cited, and it says “I don't know” rather than guess.

- ✓ Grounded in official documentation
- ✓ A source citation on every answer
- ✓ No made-up commands or values

NOT A CHATBOT IN A TAB

It knows your page — and turns answers into actions.

Knows where you are

Tailors answers to the page you're on.

Takes you there

Links jump you to the right WebUI screen.

Explains events

Turns an alert into a cause and a fix.

Hands you the CLI

Commands ready to copy in one click.

THE OTHER BIG TICKET DRIVER

Cluster events, explained in plain English.

⚠ **Event 920100012 · Critical**

Drive in bay 3 on node 10 reported a predictive failure (SMART).

"What does this mean? Is my data at risk? What do I do?"

✦ **Assistant**

The drive is predicted to fail. Your data stays protected by OneFS, but you should SmartFail and replace the drive. Run isi devices to confirm, then replace bay 3.

Event Reference Guide

WHY IT MATTERS

Fewer tickets. Faster admins. Fully local.

Deflects the easy cases

The how-to and event questions self-serve, in context.

Lowers the skill barrier

Junior admins get senior-level answers, instantly.

Runs on the cluster

100% local — no internet, nothing leaves the box.
